

HAEGY

What is it?

An innovative furniture system

What is new?

A powerful panel connection solution

What is it for?

Made-to-measure furniture with unlimited potential for shapes

Who is it for?

Architects and designers

Who are we ?

Manufacturers, distributors, creators of Haegy

Our system results from 15 years of research and experience as cabinet makers and mechatronic engineers. We have developed an operating system for a rational manufacturing of made-to-measure furniture.

Haegy combines a unique and efficient collaborative design process with architects and designers with the production and installation of extremely precise made-to-measure furniture.

Efficient, evolving, long-lasting, and strictly minimal furniture with infinite possibilities of shapes.

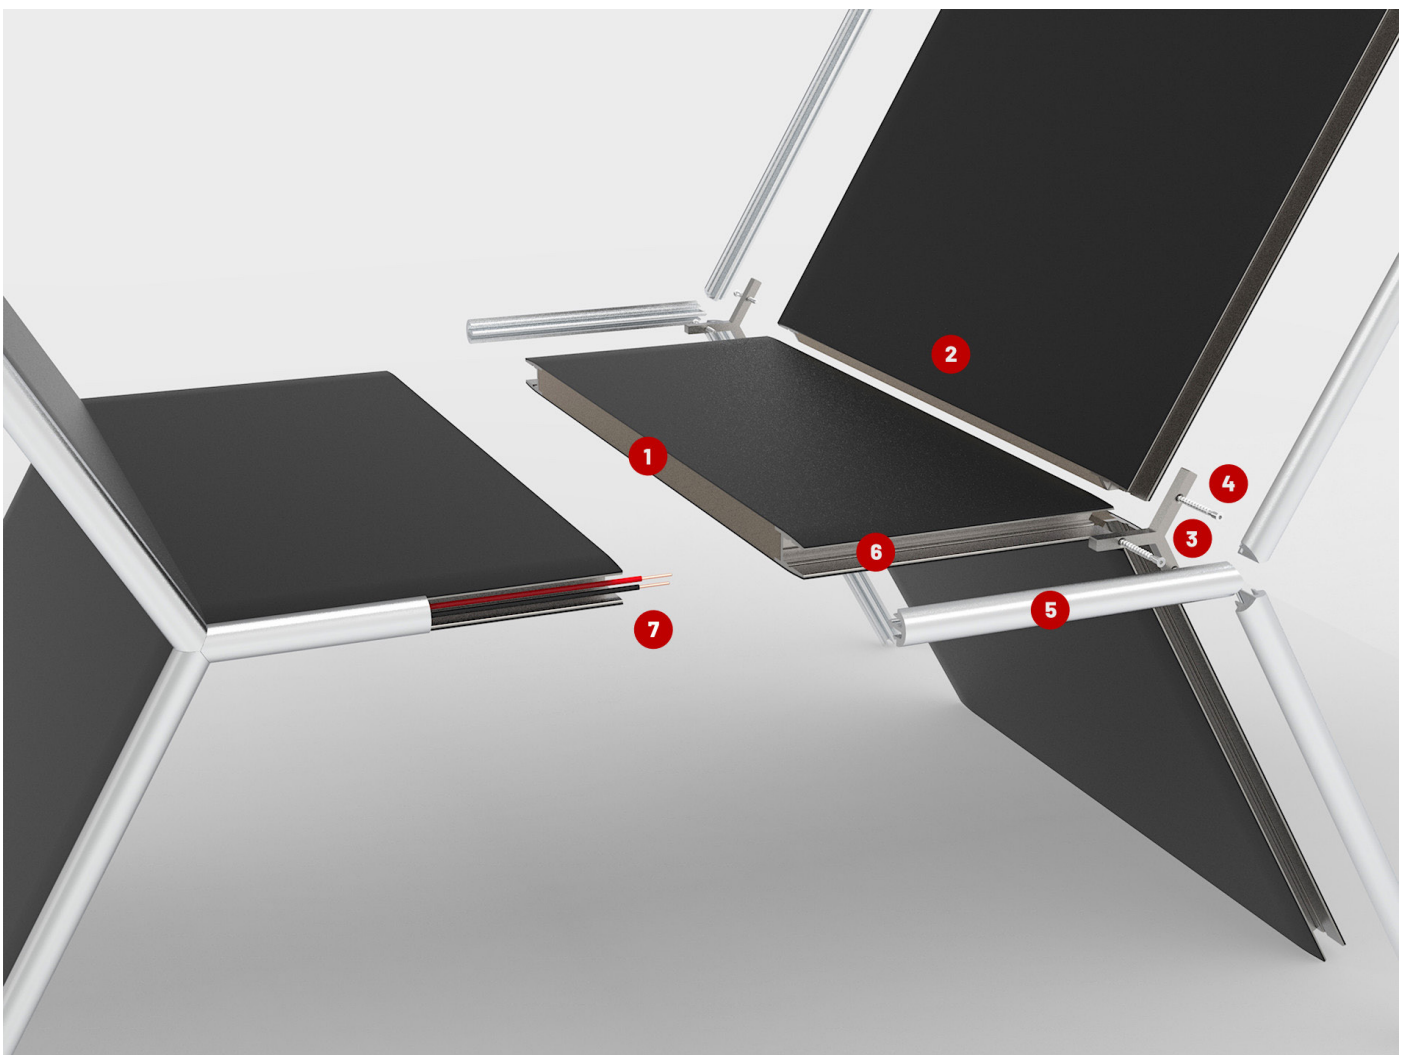

TECHNOLOGY

This radical and minimalist assemblage technology allows strong, invisible and perfectly fitted connections between panels, at any angle.

The panels, composed of veneer laminated over a wooden core with aluminum side channels, are first cut to the desired length. Extremities are then machined with the appropriate radial cuts for each configuration. Panels are then assembled using laser cut steel connectors, hidden behind a clipped aluminum profile.

Key factors :

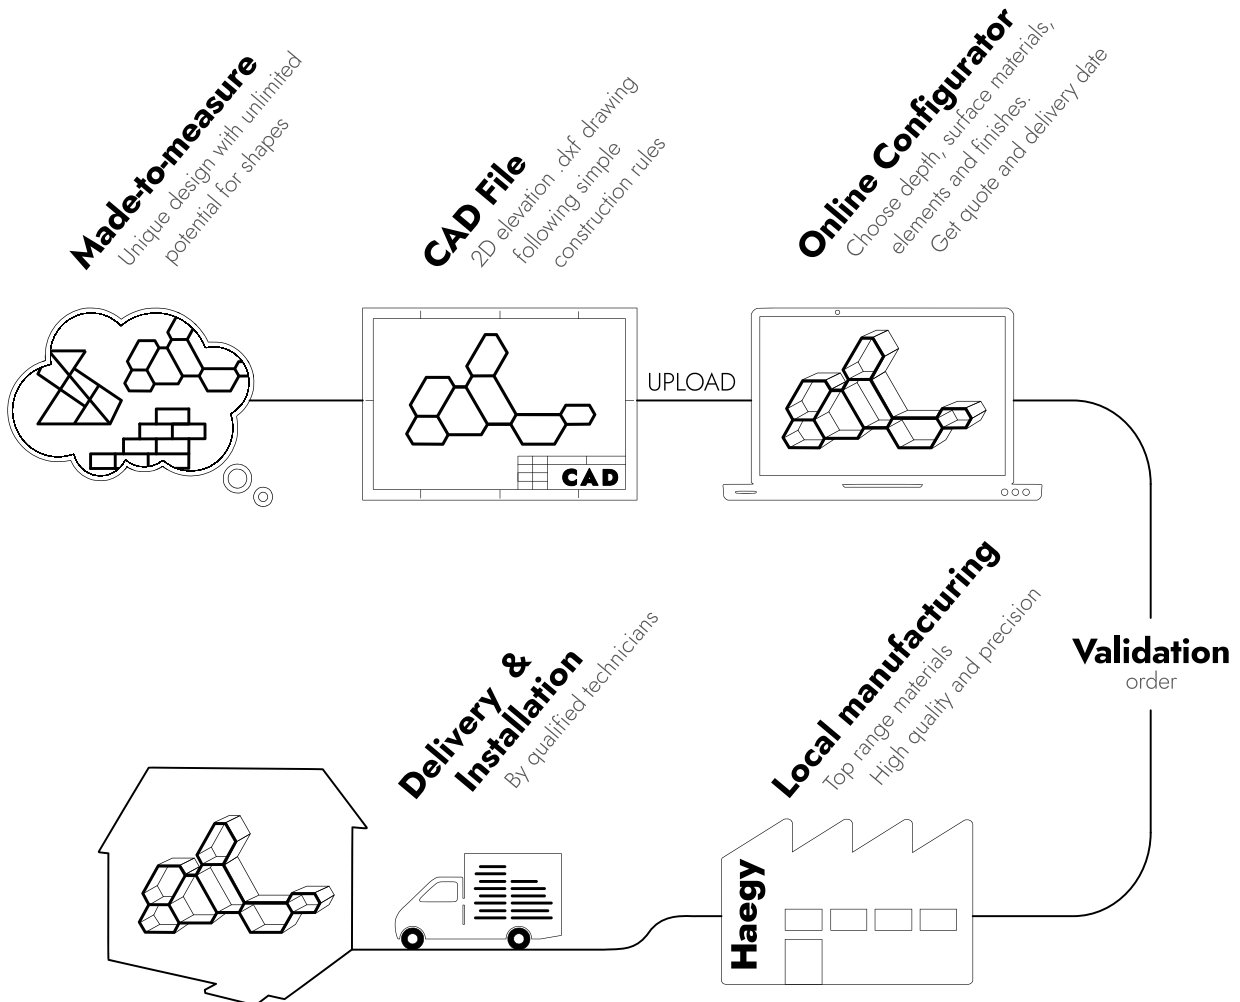

- Allows customization
- Minimalist design
- Perfectly fitted junctions
- Invisible fixings
- High resistance
- Durable wood and aluminum composite panels
- Removable 13mm thick solid aluminum covers that hide all technical fixing
- Possible electrification of the furniture behind the aluminum profile.

1. Core panel
2. Covering surface
3. Connector
4. Screw
5. Aluminum profile
6. Channel
7. Wiring

SYSTEM

Our concept covers all stages of the design and manufacturing process, from drawing to installation of custom made furniture.

Process for the creative professional :

Draw a 2D elevation of a furniture project on your CAD software, following our very simple construction rules and upload the .dxf file to our powerful online configurator.

Customize the furniture according to the configurator's built-in parameters. Choose panel depth, surface finish, cover profile shape and colors, fitted elements and accessories.

Get the price and delivery date in real time.

Place your order and wait for delivery and installation!

Configurator built-in parameters :

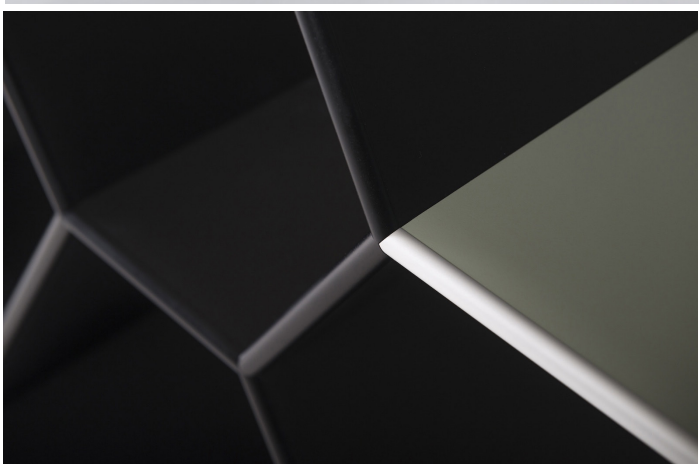

5 panel depths : 200, 280, 360, 440, 520mm.

3 aluminum cover profile shapes : rounded, faceted, concave.

8 color finishes for the aluminum cover profiles: raw aluminum, anodised aluminum, black, white, red, blue, green and yellow.

5 covering surfaces : black or white color-core laminate, walnut or oak veneer, raw or anodised silver aluminum foil.

A wide selection of fitted elements and accessories : back panels, doors, shelves, etc.

PHILOSOPHY

As manufacturers, we think that modular furniture should not be limited to the assembly of standardised elements, but become a heightened experience of functionalist design.

Made-to-measure is not an option for us. It is part of our genetic code.

We offer creative professionals a reliable tool, a thoughtfully and responsibly designed system.

We believe that well designed furniture is evolving, long lasting, engineered down to the last detail and based on creative collaboration.
